

Level 5

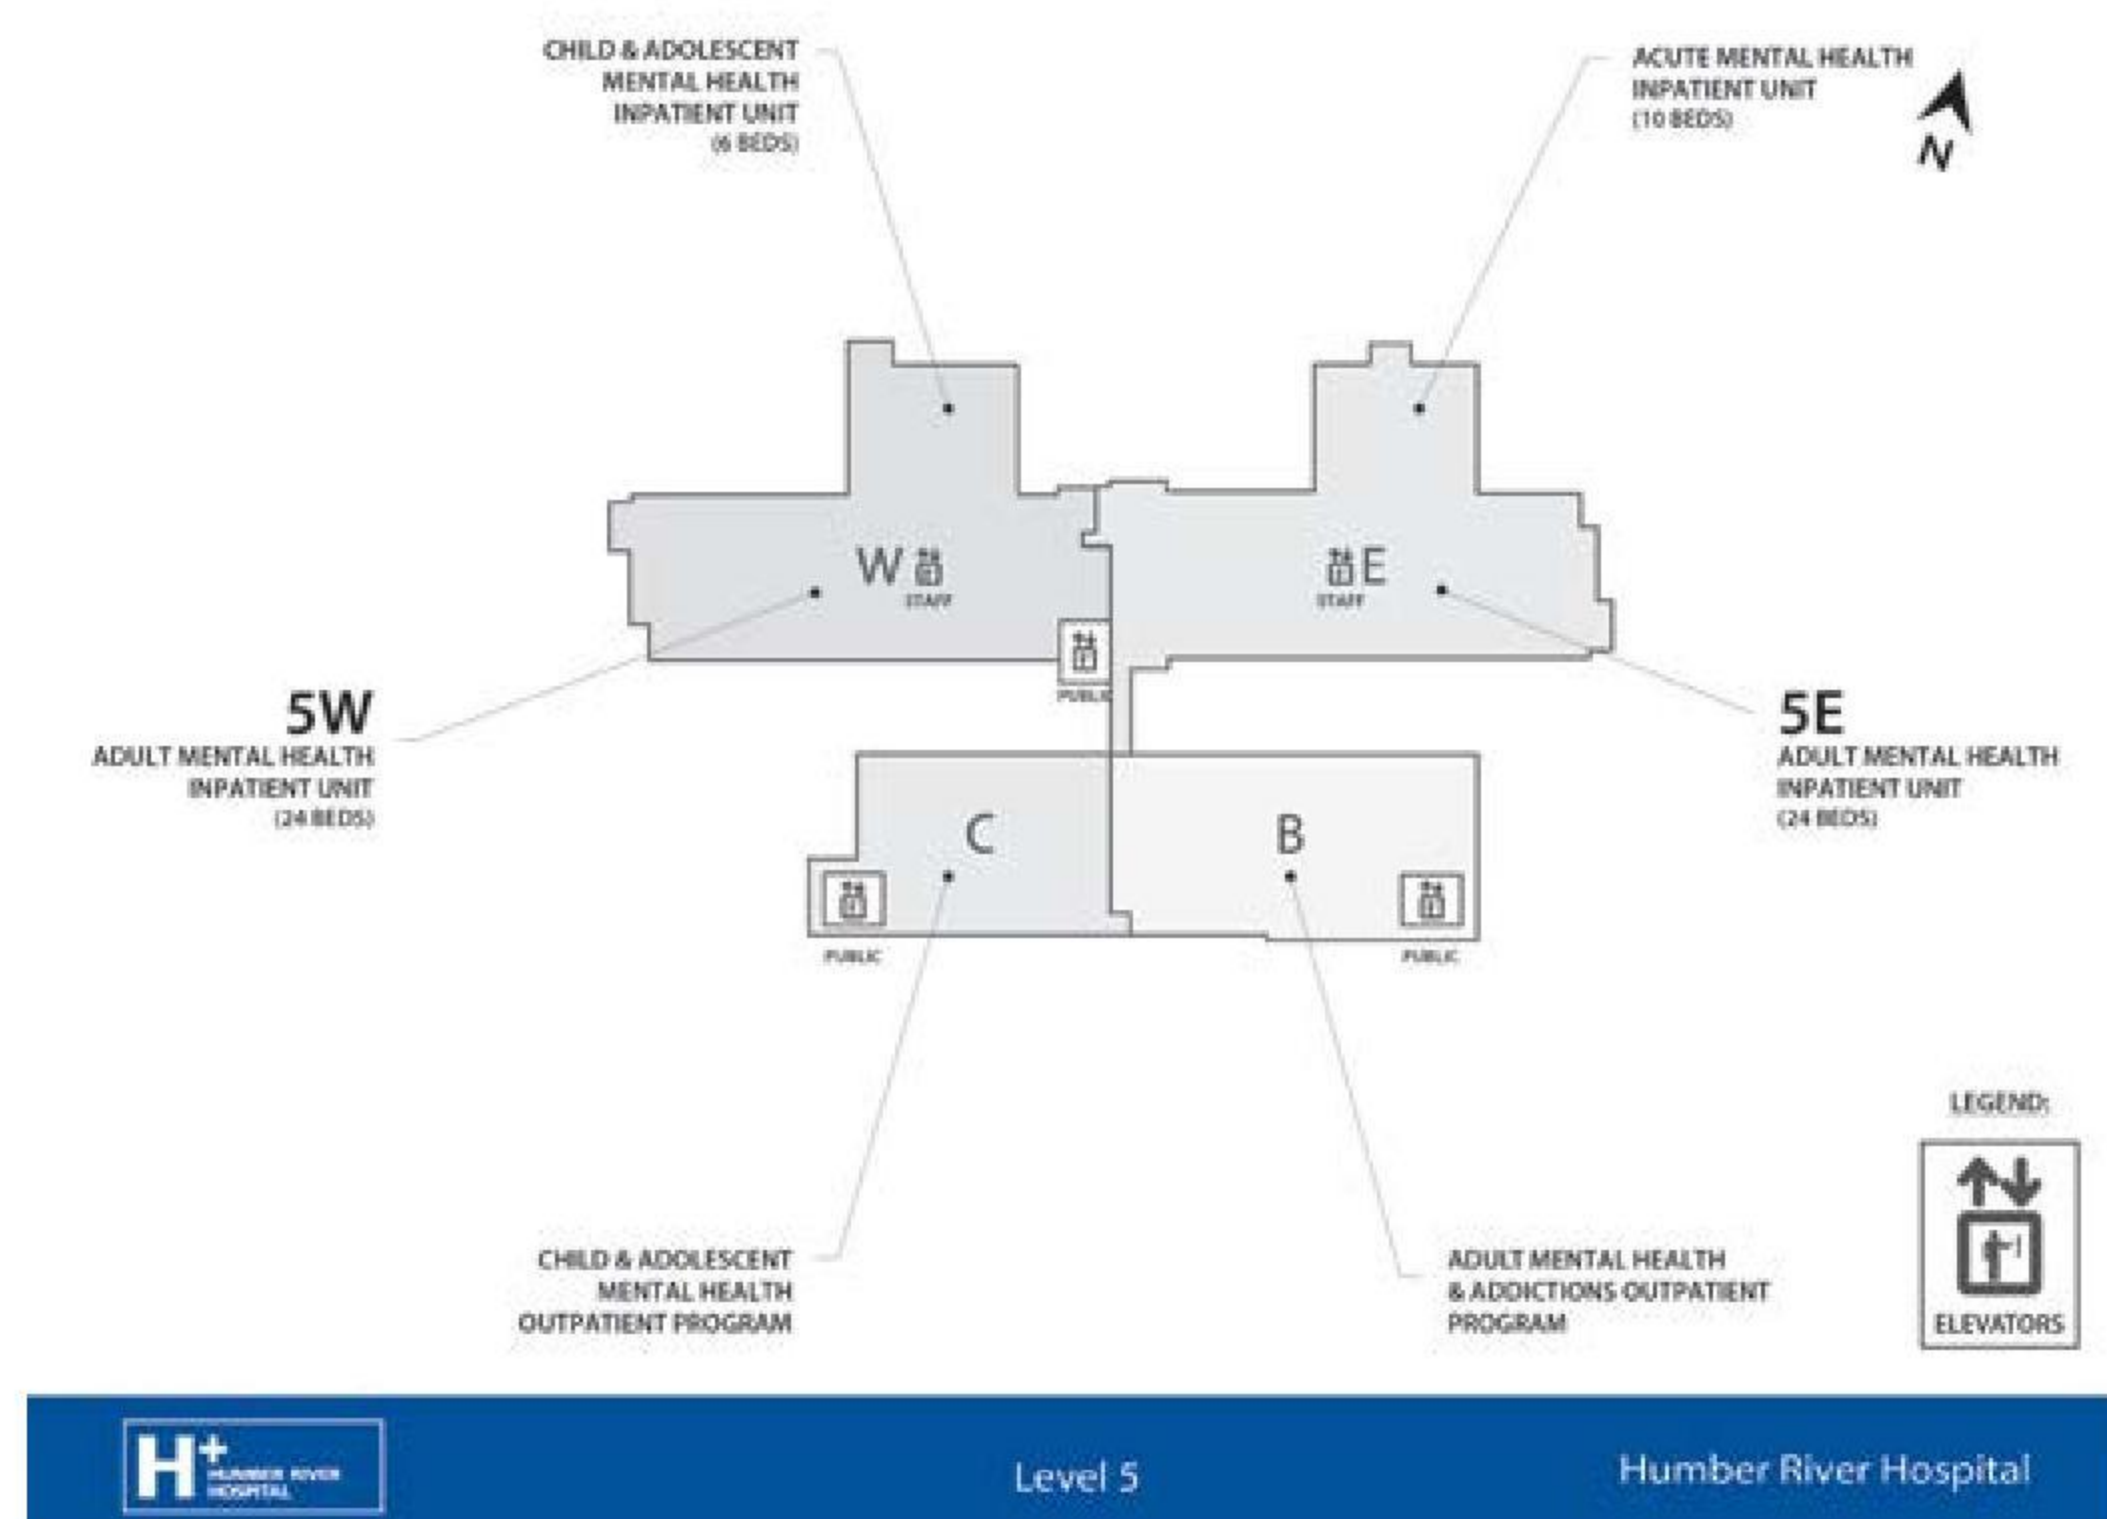

Humber River's Mental Health and Addictions Program is an internationally-recognized leader in providing comprehensive services and a collaborative, interdisciplinary treatment approach to care for our patients.

A number of its staff and physicians are highly sought after as clinicians and lecturers, travelling as far away as China and Europe over the years to share their expertise.

Level Five is entirely dedicated to this great program. Here the new hospital will house the entire range of inpatient and outpatient Mental Health and Addictions services.

Designed to meet the diverse need of our community, our continuum of care includes crisis and inpatient services for children, adolescents and adults, and outpatient services treating mental health issues, addictions and more.

For inpatients, the Child & Adolescent and both Acute Mental Health units each have a rooftop garden for patients to enjoy, weather permitting, of course.

Level 6

This is the Critical Care floor. Here you will find space for up to 48 intensive care patients and an exceptional team of staff, physicians and allied health staff caring for those facing the most serious medical issues.

Here is where you will clearly see our digital vision in action - the use of the finest technology available to us as an enabler of expert, compassionate care.

The use of 'push' technology to expedite the delivery of important test results and images to the patient's Electronic Health Record and to the attending physicians' hand-held devices will help with faster diagnoses and consultation with on-call specialists. Here the use of smart bed technology will also help us further enhance the care required by some of our most vulnerable patients.

This is very intense, personal care, under often challenging circumstances for families. Each patient room provides space for family members to stay for extended periods of time. There are visitor respite lounges and an overnight suite should a family require this service.
